                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a peptide fragment from a novel human type CC ligand polypeptide corresponding to annion acid residues 34 to 53 of the Sequence represented in AAW31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function CC modulator, a central nervous system modulator or a pancreatic function CC modulator. This ligand could have specific applications as a CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC trauma, growth hormone secretory disease, hyper-and polyphagia, CC hyperlipideemia, hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, CC hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, CC translent brain ischaemia, epilepsy, amylotrophic lateral sclerosis, CC acute myocardial infarction, infertility, spinocerebellar degeneration, CC bone fracture, trauma, atopic dermatitis, osteoporosis and/or CC clagogalactia. Assays can also be developed to screen compounds which are CC capable of altering the binding activity of the ligand affecting CC activation of the G protein-coupled receptor protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a human type ligand fragment. It

Cl is used in the course of the invention. The specification describes

can agent for modulating prolactin secretion which comprises a

CC ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR)

CC protein. The agents for promoting prolactin secretion can be used for

CC treating or preventing hypoovarianism, gonecyst cacogenesis, menopausal

CC syndrome, euthyroid or hypometabolism. They can by used for promoting

CC lactation in a domestic mammal and as an aphrodistac. The agents for

CC inhibiting prolactin secretion can be used for treating or preventing

CC pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease,

CC prolactinoma, infertility, impotence, amenorrhea, galactorrhea,

CC protes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia.

CC modulating placental function can be used for treating or preventing

CC modulating prolacental function can be used for treating or preventing

CC choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus,

CC abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

```
Ilgand polypeptide corresponding to amino acid residues 22 to 52 of the Sequence represented in AAW31383 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical CC compositions containing this ligand may be used as a pituitary function CC modulator, a central nervous system modulator or a pancreatic function CC modulator. This ligand could have specific applications as a CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic cs prophylactic or therapeutic agent for dementia, depression, hyperkinetic cs prophylactic or therapeutic agent for dementia, depression, hyperkinetic cf trauma, growth hormone secretory disease, anxiety syndrome, schizophrenia, CC hyperlipidaemia, hypercholesterolaemia, hyper- and polyphagia, CC hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, CC Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, transient brain ischemia, epilepsy, amylotrophic lateral sclerosis, CC acute myocardial infarction, infertility, spinocerabellar degeneration, CC considered to screen compounds which are capable of altering the binding activity of the ligand affecting CC activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                     Producing a 19P2 pituitary G protein receptor ligand of a fusion protein, useful for preventing and treating breast cancer, renal failure and autoimmune disease
                                                                                                                     Moriya
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a rat type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocvarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pitulitary adenomatosis, brain tumour, emmenlopathy, autoimmune disease, prolactions infertility imports our emmenlopathy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      prolactinoma, infertility, impotence, amenorrhea, galactorrhea, acromegaly, Chlari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus.

Pharmaceutical compositions containing this liquand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This liquand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, hyperripidaemia, hypercholesterolaemia, hyperridaemia, hypercholesterolaemia, hyperridaemia, hypercholesterolaemia, hyperridaemia, hypercholesterolaemia, hyperridaemia, hypercholesterolaemia, hyperridaemia, hyperridaemia, hyperridaemia, hyperridaemia, hypercholesterolaemia, hyperridaemia, hyperr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral scherosis, acute myocardial infarction, infertility, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting

trauma, growth hormone secretory disease, hyper- and polyphagia, hypercipidaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatiitis, renal disease, hyperprolactinaemia, diabetes, cancer, pancreatiitis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infartiility, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                            This sequence represents a peptide fragment from a novel rat type ligand polypeptide corresponding to amino acid residues 22 to 52 of the sequence represented in AAW31383 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ligand peptide for G protein-coupled receptor - acts by modulating function in the central nervous system, pancreas and pituitary gland
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2; Page 179;

CC ligand polypeptide corresponding to amino acid residues 23 to 53 of the C sequence represented in AAW31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical CC compositions containing this ligand may be used as a pituitary function CC modulator. This ligand could have specific applications as a CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic CC trauma, growth hormone secretory disease, hyper- and polyphagia, CC hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, disease, CC Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, CC translent brain ischaemia, spilepsy, amylotrophic lateral sclerosis, actute myocardial infarction, infertility, spinocerebellar degeneration, CC conseint brain ischaemia, atopic dermatitis, osteoporosis and/or coligogalactia. Assays can also be developed to screen compounds which are CC capable of altering the binding activity of the ligand affecting try. Claim Ligand peptide for G protein-coupled receptor - acts by modulating function in the central nervous system, pancreas and pituitary gland sequence represents Page 184; 2 English peptide fragment from residues 23 to 53 of

Use of G protein-coupled receptor ligands - for modulating prolactin secretion or placental function, e.g. for treating menopausal syndrome, tumours, autoimmune disease or abnormal pregnancy

Claim 3; Page 159; 241pp; English.

CC The present sequence represents a human type ligand fragment. It
C1 is used in the course of the invention. The specification describes
C2 an agent for modulating prolactin secretion which comprises a
C3 ligand polypeptide or a salt, for a G protein coupled receptor (GPCR)
C4 protein. The agents for promoting prolactin secretion can be used for
C5 treating or preventing hypocovarianism, gonecyst cacogenesis, menopausal
C6 syndrome, euthyroid or hypometabolism. They can by used for promoting
C6 lactation in a domestic mammal and as an aphrodisiac. The agents for
C7 clinibiting prolactin secretion can be used for treating or preventing
C8 pituitary adenomatosis, brain tumour, emmenlopathy, autoimmune disease,
C9 prolactinoma, infertility, impotence, amenorrhea, galactorrhea,
C9 carcomegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome,
C9 carcomegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome,
C9 corbicarcinoma, hydarid mole, irruption mole, abortion, unthrifty fetus,
C9 choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, e present sequ e, irruption mole, abortic abnormal lipidmetabolism or oxytocia

score c No. is the number of results predicted by chance to have a greater than or equal to the score of the result being printed, s derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

    -i- FUNCTION: Stimulates prolactin (PRL) release and regulates
expression of prolactin through its receptor GPR10. May still
lactotrophs directly to secrete PRL.
    -i- TISSUE SPECIFICITY: MEDULLA OBLONGATA AND HYPOTHALAMUS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Fujii R., Fukusumi S., Hosoya M., Sekiguchi M., Kitada C., Kurokawa Sumino Y., Fujino M.;
